Another translation is available from ATS \$33.70 as ATS-70L29R [1959] 27p.

Analytical methods are described for the averaging of one set of observations and for the estimation of the accuracy of results, using the methods known from literature. A comparative estimation is made of the accuracy of the most widely used methods for the determination of velocities. A method is described for the simultaneous averaging of series of hodographs (Earth Sciences--Seismology, TT, v. 5, no. 5) (over)
